

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing Of Claims:**

Please amend the claims as follows:

1. (Currently Amended) A method for communicating with a technician at a customer service location in a telecommunications system, the method comprising:

receiving an electronic message from an administration system to a technician access device at a technician server operatively associated with the administration system;

receiving a request, initiated by the technician, for access to the message from the access device;

determining verifying whether the request for access is a first occurrence of access within a predetermined time period based on a daily procedure performed by the technician;

determining if whether the electronic message has been modified since a past request for access to the message initiated by the technician; and

transmitting the received electronic message to the access device for display at the customer service location after the occurrence of a determination that the request for access is a second or more occurrence of access within the predetermined time period based on the daily procedure performed by the technician and a determination that the electronic message has been modified since the past request for access to the message initiated by the technician.

2. - 3. (Cancelled)

4. (Previously Presented) The method of Claim 1, further comprising displaying the electronic message on a screen display if the access is verified as the first occurrence in the time period.

5. (Previously Presented) The method of Claim 1, further comprising not displaying the electronic message on a screen display if the access is verified as a second or subsequent time in the time period.

6. (Previously Presented) The method of Claim 1, further comprising sending the electronic message to an output device.

7. (Original) The method of Claim 1, further comprising retrieving at least one previously generated electronic message.

8. (Previously Presented) The method of Claim 1, wherein the electronic message includes at least a first portion and a second portion.

9. (Previously Presented) The method of Claim 8, further comprising customizing at least one of the portions of the electronic message for displaying the customized portion to at least one technician.

10. (Previously Presented) The method of Claim 9, further comprising identifying a profile characteristic stored in the administration system in connection with customizing at least one of the portions.

11. (Currently Amended) A system for communicating with a technician at a customer service location in a telecommunications system, the system comprising:

an administration system configured for generating at least one electronic message;

a technician server operatively associated with the administration system, the technician server configured for:

receiving a first generated electronic message;

sending the first generated message to an access device;

receiving a second generated electronic message; and

sending the second generated electronic message to the access device if,

the second generated electronic message is a modified version of the first generated electronic message that was previously sent to the access device, and

a request for access to the technician server, initiated by a technician, to the first message from the access device is a second or greater occurrence of access within a predetermined time period based on a daily procedure performed by the technician; and

a screen display configured to display the electronic message for viewing on the access device if the generated electronic message was received by the access device from the technician server.

12. (Previously Presented) The system of Claim 11, further comprising at least one output device operatively associated with the access device and configured for receiving the electronic message.

13. (Previously Presented) The system of Claim 11, wherein the administration system includes a database having at least one profile characteristic stored thereon.

14. (Currently Amended) A computer-readable storage medium containing instructions for assisting a computer system to perform a method for communicating with a technician at a customer service location in a telecommunications system, the method comprising:

receiving an electronic message from an administration system to a technician access device at a technician server operatively associated with the administration system;

receiving a request, initiated by the technician, for access to the message from the access device;

determining verifying whether the request for access is a first occurrence of access within a predetermined time period based on a daily procedure performed by the technician; and

determining whether the electronic message has been modified since a past request for access to the message initiated by the technician; and

transmitting the received electronic message to the access device for display at the customer service location after the occurrence of a determination that the request for access is a second or greater occurrence of access within the predetermined time period based on the daily procedure performed by the technician and a determination that the electronic message has been modified since the past request for access to the message initiated by the technician.

15. (Cancelled)

16. (Previously Presented) The medium of Claim 14, further comprising displaying the electronic message on a screen display if the access is verified as the first occurrence in the time period.

17. (Previously Presented) The medium of Claim 14, further comprising not displaying the electronic message on a screen display if the access is verified as a second or subsequent time in the time period.

18. (Previously Presented) The medium of Claim 14, wherein the electronic message includes at least a first portion and a second portion.

19. (Previously Presented) The medium of Claim 14, further comprising customizing at least one of the portions of the electronic message for displaying the customized portion to at least one technician.

20. (Previously Presented) The medium of Claim 19, further comprising identifying a profile characteristic stored in the administration system in connection with customizing at least one of the portions.

21. (Currently Amended) A system for communicating with a technician at a customer service location in a telecommunications system, the system comprising:

means for receiving an electronic message from an administration system to a technician access device at a technician server operatively associated with said administration system;

means for receiving a request, initiated by the technician, for access to the message from the access device;

means for verifying determining whether the request for access is a first occurrence of access within a predetermined time period based on a daily procedure performed by the technician; and

means for determining whether the electronic message has been modified since a past request for access to the message initiated by the technician; and

means for transmitting the received electronic message to the access device for display at the customer service location after the occurrence of a determination that the request for access is second or greater occurrence of access within the predetermined time period based on the daily procedure performed by the technician and a determination that the electronic message has been modified since the past request for access to the message initiated by the technician.

22. (Previously Presented) The system of Claim 21, further comprising means for outputting the displayed electronic message.

23. (Original) The system of Claim 21, further comprising means for retrieving at least one previously generated electronic message.

24. (Previously Presented) The system of Claim 21, wherein the electronic message includes at least a first portion and a second portion.

25. (Previously Presented) The system of Claim 24, further comprising means for customizing at least one of the portions of the electronic message.

26. (Previously Presented) The system of Claim 25, further comprising means for displaying the customized portion to at least one technician.

27. (Previously Presented) The system of Claim 25, further comprising means for identifying a profile characteristic stored in the administration system, the administration system being operatively associated with the means for customizing at least a portion of the electronic message.

28. (Previously Presented) The system of Claim 21, further comprising means for dismissing the displayed electronic message.

29. (Currently Amended) A method for communicating with a technician at a customer service location in a telecommunications system, the method comprising:

receiving access for a technician server for receiving at least one electronic message from an administration system operatively associated with the technician server;

receiving a first electronic message if access occurs for a first time within a predetermined time period;

receiving a second electronic message if

the second electronic message is a modified version of the first electronic message, and

a request for access to the technician server, initiated by a technician, to the first message from the access device is second or greater occurrence of access within a predetermined time period based on a daily procedure performed by the technician; and

communicating the message to an output device.

30. (Previously Presented) The method of Claim 29, further comprising not receiving the electronic message if the access occurs for a second or subsequent time in the time period.

31. (Previously Presented) The method of Claim 29, wherein the output device comprises a displaying screen.

32. (Previously Presented) The method of Claim 29, wherein the electronic message includes at least a first portion and a second portion.

33. (Previously Presented) The method of Claim 32, further comprising customizing at least one of the portions of the electronic message for displaying the customized portion to at least one technician.

34. (Previously Presented) The method of Claim 33, further comprising identifying a profile characteristic stored in the administration system in connection with customizing at least one of the portions.

35. (Previously Presented) The method of Claim 1, wherein transmitting the received electronic message comprises transmitting the received electronic message comprising information conveying to a technician a hazard in a geographic area in which the technician is working.

36. (Previously Presented) The method of Claim 1, wherein determining if the electronic message has been modified since the past request for access to the message comprises determining if the electronic message has been modified since the past request for access to the message wherein subject matter in the electronic message was modified based on the geographic location of a technician.
